

What we humans can still do better than AI

Emotional intelligence and empathy

AI can't feel or intuit others' feelings. We humans are capable of understanding people's feelings on a deeper level.

Social skills

AI doesn't know how to interact with others based on culture and social cues. We are capable of navigating social situations based on human norms.

Creativity

AI can only build on content and knowledge it has access to. Without humans feeding it ideas and products of their imagination, it's only capable of recycling from what it's fed. We have the ability to come up with the creative prompts to make it work.

Physical coordination

Until it AI is paired with robotic bodies it can't engage in the physical world the way we do. We also have been using our bodies since birth, the nuances of our coordination still surpass that of robots.

Sensory perception

AI cannot see, hear, smell or taste, or feel. We can still explain the human experience fully through those senses while it cannot.

Perspective and imagination

We can take those senses mention and share our perspective and it can fuel our imagination where the AI cannot.
